### SUMMARY

Software Developer with 1+ years of hands-on experience in React.js, building responsive and scalable web applications. Proficient in developing reusable components, integrating RESTful APIs, and optimizing performance. Adept at working with modern JavaScript (ES6+), state management libraries like Redux or Context API, and tooling such as Webpack. Passionate about writing clean, maintainable code and delivering high-quality user experiences.

### WORK EXPERIENCE

#### Executive Solution Pvt. Ltd

##### Software Developer

Nov 2024 – Present

- Developed and maintained core frontend features for a cloud-based HRMS platform focused on automating HR workflows like payroll, attendance, and employee management.
- Built responsive and reusable React.js components using Hooks, Context API, and Ant Design to streamline UI development.
- Integrated RESTful APIs for real-time tracking of HR data, enabling data-driven insights across various modules.
- Improved user experience (UX) by implementing dynamic dashboards, modals, forms, and data grids for employee and payroll management.
- Worked on role-based dashboards, enhancing manager and employee-specific views with charts, filters, and insights.
- Collaborated with backend and QA teams in Agile sprints to deliver new features and resolve UI bugs efficiently.
- Optimized performance by implementing code-splitting, lazy loading, and efficient state management.

#### Adnecto Technology

##### Software Developer

Feb 2024 – Nov 2024 Savicase

- Developed intuitive and responsive user interfaces for the Law To Do application using Next.js, JavaScript, HTML/CSS, and Chakra UI.
- Migrated from page-based routing to App Router to enhance application security and prevent exposure of sensitive credentials in URLs.
- Built clean and modular API logic in Node.js using Prisma and Supabase
- Designed and integrated dynamic forms and connected task management features with RESTful APIs.
- Built reusable frontend components (e.g., calendar) and utility functions (e.g., text truncation) to improve code reusability and performance.

### EDUCATION

#### Bachelor's of Computer Application

##### Guru Gobind Singh Indraprastha University

2020 - 2023

#### Master's of Computer Application

##### Indira Gandhi National Open University

2024 - Present

### SKILLS

**Language:** JavaScript, TypeScript

**Frameworks/Libraries:** HTML/CSS, SCSS, React.js, Next.js, Express, ES6+, Chakra UI, Ant Design, Redux

**Tools:** Git & GitHub, VS Code

### PERSONAL PROJECT

#### Camera App

link- <https://github.com/Rishahum/Camera-Aap>

It is like a web camera in laptop, it has four filters which we can apply. Photos and videos get stored in gallery(local storage) which can be further deleted and downloaded.

#### DASHBOARD

link- <https://github.com/Rishahum/Dashboard>

This is data visualization project.

Using chart.js for data visualization and express framework to handle backend.

#### NATION MASTER

link- <https://github.com/Rishahum/Nation-Master>

This project is used to made crud operations using NodeJS for backend and Next.js for frontend. Using restful API calls, unique id will increase programming efficiency frontend integration with backend. Using MongoDB for data modeling and query optimization.

#### QUIZ APPLICATION

link:- <https://6554385dd4c7e04cb3f28b35--spontaneous-beijinho-55a663.netlify.app/>

This project made is a basic react app. Every question has 4 option and a solutions. Tech:- JavaScript, html5, css3.
